Profile

Computer science undergraduate at Chitkara University with a 9.55/10 CGPA and hands-on academic project experience in C++ transit routing and full-stack web development. Interested in building practical software across backend services, data processing, and user-facing applications.

Education

Chitkara University, Himachal Pradesh — 3rd Year, 5th Semester
Undergraduate student — CGPA: 9.55 / 10

Projects

ChronoPath: GTFS Transit Route Planner — Academic project
C++17, CMake, HTML, CSS, JavaScript

- Built a C++17 journey planner that parses GTFS files and searches time-dependent bus routes in a Mumbai-area KDMT/BEST network.
- Implemented round-based trip scanning, transfer buffers, nearby-stop walking links, and route-leg reconstruction.
- Added HTTP JSON endpoints and a browser interface for stop selection, network viewing, and journey results.
- Processed a feed snapshot containing 7,506 stops, 935 routes, 99,080 trips, and over 2.65 million stop-time records.
- Designed a future ML delay-prediction extension; model training and prediction metrics are not yet part of the documented prototype.

MediConnect: Hospital Appointment Portal — Academic team project
React, Vite, Node.js, Express, MongoDB, Mongoose

- Developed, as part of a course team, a web portal for hospital discovery, doctor browsing, appointment requests, and appointment history.
- Project includes a React/Vite client and a Node.js/Express API with MongoDB persistence through Mongoose.
- Documented API flows for account registration and login, hospital and doctor browsing, and appointment creation and retrieval.
- Built client screens for provider details, appointment booking, and an educational, rule-based symptom checker.

Technical Skills

Languages: C++, JavaScript, HTML, CSS
Backend: Node.js, Express.js, REST APIs, HTTP, JSON
Frontend: React, Vite, responsive browser interfaces
Data and storage: MongoDB, Mongoose, CSV parsing, GTFS data modeling
Tools and concepts: Git, GitHub, CMake, time-dependent routing, round-based transit algorithms, API integration
Relevant coursework: Back End Engineering; Applied AI and Prototype Development
